Clinical Record Audit Tool – ORAL HEALTH (Collection of Client data)

Hospital and Health Service:	Facility:
Audit date/period:	Client Medical Record Number (MRN):
Clinician for course of care:	Auditor name:

Client audit tool: collects client level data from the clinical record **for the last complete course of oral health care**, use one audit tool for each client audited. The documentation audited includes the client registration, consent and medical/dental history forms as well as the examination and treatment sheet. In addition, this audit can include the 3Cs verification checklist audit for all treatments undertaken in the last completed course of care.

- Notes:
- Each facility needs to determine those audit questions that are applicable to their facility / health service circumstances for review
 - Some questions and responses may not be applicable (eg. at a ward/unit level) and can be adapted to suit individual requirements
 - The measurement plan details each audit question and the action/criteria it aligns to in the standard
 - This audit can be used prospectively or retrospectively. When used for retrospective chart audit, all questions relate to the last completed course of care (oral health) (note a course of care may involve a number of occasions of service)
 - This tool covers oral health services delivered in a community / oral health care setting and not when oral health clients are admitted to an acute facility core a procedure
