Intrapartum Record W/O Partogram and 2\textsuperscript{nd} Stage Observations Review 2018

Version 1.0
History of the Intrapartum Record

- 2008 Southern Queensland Maternity and Neonatal Clinical Network funded project to develop a standardised record that would be used in all southern area birthing facilities
- Statewide Maternity and Neonatal Clinical Network (SWMNCN) Forum October 2009, clinicians identified the need to standardise the Intrapartum record
- Original Workgroup commissioned in March 2010
Review Process

• Commissioned by SWMNCN April 2015 to review Intrapartum Record
• National consensus statement – essential elements and responding to clinical deterioration
• Meets Standard 9.3 of the National Safety and Quality Health Service Standards
• Coronial recommendations
• Patient Safety Data
Review Process and Changes

- The record has been developed over the last 2.5 years
- 16 Maternity Sites trialled the record
- Endorsed at the SWMNCN meeting in May 2018
- In total 140 change requests have been received which have been incorporated into the record
- The Intrapartum Record is now called the Intrapartum Record W/O Partogram and 2\textsuperscript{nd} Stage Observations
- Maternal and Fetal observations have been removed to facilitate optimal human factors designed observation charts
- Partogram is exactly the same as the previous Partogram for the first stage of labour but now facilitates graphical, colour coded documentation of maternal and fetal heart rate observations as well as mandating escalation of abnormal maternal and fetal heart rate during labour to meet Standard 9.3
- The Second Stage observation form has been redesigned and shows a vertical graphical representation of the maternal and fetal heart rates on page one to facilitate visual recognition and response to clinical deterioration.
Review Process

- Governance through the Statewide Maternity and Neonatal Clinical Network
- Provided clinical lead for workgroup chair
- Endorsement of final documents
- Establishment of workgroup through an Expression of Interest from clinicians across the state representing tertiary, regional and rural sites
- Literature Reviews to review evidence base
- Compliance with relevant standards and practice as appropriate
- Involvement of Human Factors Experts
- Trial at 18 Maternity Sites
- Thank you to the many clinicians and others who have provided valuable time into the review of this record.

Intrapartum Record

Risk Factors / Management Plan

Risk Factors

- GBS positive
- Weight (25 weeks)
- Current BMI (36 weeks)
- Antenatal / VTE risk
- Diabetes
- Abnormal ultrasound finding
- PPROM risk
- 3rd - 4th degree tear

Management Plan

- Plan discussed with woman

Risk Screen

- Falls Risk
- Pressure Injury Risk

Signature

- Name
- Designation
- Initials

Intrapartum Record
(without Partogram and 2nd stage observations)

Perineum Repair
- Label trauma on diagram and succinct descriptions of repair.
- Document suture material and anesthetic used.
- Document PR examination and consider PR analgesia.

Perineal Assessment
- Perineal Tears: Intact, 1st tear, 2nd tear, 3rd tear, 4th tear, Repaired in OT: Yes, No
- Epistaxis: Type: Indication: N/A
- Perineal Repair: Required, Not required, Declined, Signature: Date:
- Labia Tear: Yes, No
- PR Examination Complete: Yes, No
- Perineal Check: Check 1: Name, Check 2: Name
