

# Revised Paediatric Sepsis Clinical Pathway Factsheet

## Background

Sepsis represents a leading cause of preventable death and persistent harm for children in Queensland. An evidence based Paediatric Sepsis Clinical Pathway was implemented in 16 HHS Emergency Departments (ED) in Queensland and 80 rural and remote sites as part of the [Clinical Excellence Sepsis Breakthrough Collaborative Project](#) in 2019/2020

Many advancements have since been made including:

- an 18-month trial in 2020/2021 piloting a Paediatric Sepsis Inpatient Pathway in 8 paediatric wards across the state
- the development of a [Sepsis Clinical Care Standard](#) to improve the standards of care across the country and
- ongoing feedback from consumers wanting consistent information and support throughout their sepsis journey.

To meet these needs, the Pathway has been revised to extend beyond the acute resuscitation and treatment bundle into a sepsis management plan now covering the whole sepsis episode from presentation to discharge home.

## About the revised Paediatric Sepsis Pathway

The revised Paediatric Sepsis Pathway is based on international best practice and incorporates input from a broad range of paediatric experts and consumers across the state.

The ED Tertiary and Secondary, ED Rural and Remote and Paediatric Sepsis Inpatient Pathways have now been combined into one single pathway that is suitable regardless of location.

Newly included in this paper pathway:

- monitoring and reassessment guide
- comprehensive management plan
- information sheet for parents and carers of a child diagnosed with sepsis

Updated content includes:

- screening and recognition tool
- antimicrobial guidelines
- sepsis checklist for families

The revised Pathway has been reviewed and evaluated by an independent human factors expert to ensure clarity, usability, and alignment with the national Sepsis Clinical Care standard.

The form is titled 'PAEDIATRIC Sepsis Pathway' and includes fields for patient identification (URN, Family name, Given name, Address, Date of birth, Sex). It contains several decision-making sections with checkboxes and flow arrows. A prominent watermark 'PROPOSED ONLY' is visible across the center of the form.

Go to [CEQ Clinical Pathways](#) to view a copy of the Pathway or refer to the *How to Order* section below to order for your facility.

## Stakeholder Engagement

The revised Pathway was developed following extensive consultation with multiple stakeholders across Queensland. There has been repeated and widespread consultation with the following groups:

- Paediatric Sepsis Clinical Advisory Group
- Queensland Child and Youth Clinical Network (QYCNC) Clinician Collaborative
- Children's Health Queensland Medicines Advisory Committee (CHQMAC)
- Rural and Remote Sepsis Working Group
- Queensland Emergency Department Strategic Advisory Panel (QEDSAP) Emergency Care of Children Working Group
- Directors of Paediatrics
- Paediatric Intensive Care Advisory Group (PICAG)

## How to order

The revised Pathway will be available to order directly via [WINC](#) from the first week of March 2023. Use the code below or speak to your cost centre manager or local Health Information Manager (HIM) to arrange purchasing of the forms.

Form ID	Title	Winc code
SW1205	Paediatric Sepsis Pathway	1NY42186

We recognise there will be a period of transition for facilities using the ED Tertiary and Secondary (SW866), ED Rural and Remote (SW944) and Inpatient Paediatric Sepsis Pathways (SW1054). Facilities can exhaust all their existing stock before reordering the revised Paediatric Sepsis Pathway (SW1205).
