Executive Foreword

Dr Jacinta Powell
Executive Director, Logan Bayside Health Network

The Queensland health care system faces numerous challenges and demands including population growth, high levels of chronic disease, cultural diversities and uncertainty with funding. The Future Hospital Program (FHP) is Logan and Beaudesert Hospitals commitment to addressing these challenges.

The FHP is our ten-year transformational strategy that will position us as leaders across Queensland as the first program of its kind and will be undertaken with the support and collaboration of the Clinical Excellence Division, Queensland Health. This strategy aligns with Metro South Health’s 2015-2019 Strategic Plan in embracing new approaches to deliver best-practice patient care.

The Future Hospital Program Strategic Plan 2017-2027 provides our vision for the future and builds upon our existing exemplar hospital performance and continues to engage with and develop our ambitious workforce. It sets the direction for the next ten years and focuses on driving five strategic priorities:

- Safety and Reliability;
- Workforce Capability;
- Person-Centred Care;
- Research and Innovation; and
- Quality Improvement.

In line with these priorities, we aim to design and trial new clinical innovations and best practice models of care and create a culture of continuous redesign and improvement. Critical to the success of the strategy is the engagement of clinicians to drive change and explore new ways of doing business.

On behalf of the Logan and Beaudesert Executive, I would like to acknowledge our commitment to making a real difference now and well into the future for our patients, our community and our staff. I commend this strategic plan and look forward to the journey to transform not only our hospitals but the future of healthcare.
Message from

Marion Tower
Metro South Health Board Member and Sponsor for Future Hospital Program

I want to thank the staff from Logan and Beaudesert hospitals for affording me the privilege of being involved with the Future Hospital Program. Logan and Beaudesert hospitals face considerable challenges related to population growth, increasing rates of chronic disease and delivering services in a testing economic climate. Logan and Beaudesert hospitals have risen to meet these challenges by aiming to *Lead, Transform and Excel* in the delivery of healthcare, by re-envisioning what best-practice healthcare looks like. I have been fortunate to be on this journey with you and watch this unfold, and see firsthand the commitment and passion of staff in the work of redesigning and trialling new ways of delivering best practice care.

I have been inspired by the staff - at all levels - who have been involved in the Future Hospital Program. Their ambition to achieve the Future Hospital Program’s aims of delivering safer and kinder care, becoming the beacon for clinical excellence and being nationally recognised for innovation and excellence in person-centred care, education and research is being realised.

Over the past year, on my journey with you, I have seen some of the outcomes you have achieved, that ultimately benefit patients, Logan and Beaudesert communities and inform healthcare delivery more widely. This is evident in the redesign initiatives related to patient-centred care and in sharing the outcomes of these initiatives with national and international peers.

In a healthcare world driven by systems and processes the Future Hospital Program is daring to be different in delivering its mission of growing the best, the kindest, and the safest care for all. I offer my congratulations to you all for what you have achieved in the first 12 months of the program and I look forward to continuing to work closely with you as you continue to achieve your goals.
Message from

Dr Brian McGowan
Senior Clinical Lead, Future Hospital Program

Our Hospital, Our Community, Our Future.
Welcome to our first Future Hospital Program report.
In this report you will read an account of the many achievements of the last year.
As Al Jolson said in 1927 after the first talking movie - “You ain’t heard nuthin yet”!
This is only the beginning of a progressive transformation of our patient care.
You will read about work done on the key themes of Person-Centred Care, Workforce Capability, Continuous Quality Improvement, Research & Innovation, and Safety & Reliability.
The success of these interdependent components of the Future Hospital are all predicated on our ambition to develop together a vibrant safety culture based on Civility, Respect, Accountability and Kindness - To patients and also, importantly to each other.

The quality and safety of care delivered by a hospital depends directly on these qualities in the staff - all staff.
Ultimately this culture comes from within us all but needs to be nurtured and modelled by seniors and allowed to flourish in all.
Logan and Beaudesert are on a journey to becoming beacon hospitals. We can only get there with vision, ambition, team work and audacious optimism!
Who wants to come along?
The Future Hospital Program 2017-2018

Key Milestones

July 2017
Logan Hospital introduced FHP at grand rounds.
FHP Website go live.
Beaudesert Hospital introduced to FHP and S.U.F.S.
S.U.F.S. sessions commenced.
MOS launched in Clinical Governance.
Safety Champions training complete.
Short Notice Accreditation Survey trial in progress.
Virtual Fracture Clinic project running.
Planetree Bronze certification running.

August 2017
Short Notice Accreditation Survey research commenced.
SIBR pilot evaluated and not continued.

September 2017
Executive OnBoarding & Discovery sessions.

December 2017
First Green belt training.
Logan Hospital Digital Hospital go live.

November 2017
Short Notice Survey - Third round.

October 2017
Short Notice Survey - First and second round.

January 2018
Beaudesert Hospital Digital Hospital go live.

February 2018
M4I Workshop #1.
C.A.R.E. Program launched.
C.A.R.E. Panel members chosen.
Consumer Partnership Committee formed.
MOS board launched in FHP.
Additional Safety Champions trained.

March 2018
Crucial conversations training for Executives.
Person-Centred Care reflective practice learning program launched.
15 Steps Challenge trialled in 2 wards.
EiBC launched in 2 wards.
C.A.R.E. launched at Beaudesert Hospital.

April 2018
Commencement of executive coaching sessions.
MOS boards launched in Ward 3A and Renal Dialysis Unit Haemodialysis Unit.

May 2018
M4I program Workshop #2.
Transformational Leaders Program (TLP) Workshop #1.
ED Ambassador trial commenced.
Consumer Partnership Committee reviewed posters and signs.

June 2018
M4I Workshop #2 & #3.
TLP Workshop #1 & #2.
Improvement Science Fundamentals Workshop.
Second Green belt training.
2017 Annual Research Report completed.
The ability to deliver high reliability and high quality care within a constrained budget is confronting healthcare in the 21st century. Despite an ever increasing proportion of GDP being spent on healthcare there has been little impact on unacceptable levels of preventable patient harm. This fact alone demands a systems level revision of our models of care.

In 2014, the Australian Bureau of Statistics estimated that the Logan and Beaudesert region will experience a population growth rate of 3.9% per year until 2026/27. In contrast, the population growth rate for Queensland is estimated at 1.9% annually over the same period. Metro South Health (MSH) and particularly Logan and Beaudesert Hospitals (LBH), is cognisant of the need for capital works to meet the demands of the local community and to remain able to deliver high quality care to our population.

After comprehensive exploration of other healthcare organisations (including site visits to Auckland District Health Board, Canterbury District Health Board, NSW Clinical Excellence Commission and Melbourne Health), a review of the literature on best practice health innovation, and a stocktake of existing projects/initiatives in progress within our organisation, the Future Hospital Program (FHP) concept was designed and developed. The FHP aims to transform Logan and Beaudesert Hospitals into national leaders in innovative healthcare provision through five strategic priority areas:

- Safety and Reliability;
- Workforce Capability;
- Person-Centred Care;
- Research and Innovation; and
- Quality Improvement.

The Logan and Beaudesert Hospital Executive and Metro South Health Chief Executive endorsed the initial concept and work commenced on further developing the strategy. It was acknowledged early on that the program of work could not be achieved alone and for this reason, a proposal was put forward to Queensland Health Clinical Excellence Division (CED) to partner with LBH to execute the FHP vision. CED has made a commitment to the partnership through financial and in kind support.

LBH is in the early stages of its journey with significant efforts put on developing a vibrant culture of safety, positivity and staff capability in the application of improvement science.
The FHP Team will support and enable the hospital transformation by:

- Developing the supporting frameworks, systems and processes that will support and enable clinicians to turn their improvements ideas into action;
- Facilitating, coordinating and supporting the clinicians to successfully implement sustainable change initiatives;
- Providing expertise and training on quality improvement to build capacity and capability within our workforce.

The use of industry experts in clinical redesign and improvement science will assist with creating a critical mass of knowledge and expertise and will ensure that sustainable change is achieved.

A key component of the FHP transformation and one that we believe is critical to the success of the program is the empowerment of our clinicians to drive the change. It is important that clinicians are supported to engage in quality improvement initiatives that will drive clinical redesign, improved service delivery and models of care in line with evidence-based best practice.

Vision & Mission

Through the Future Hospital Program, we aim to **Lead, Transform and Excel** in the delivery of healthcare with the mission to:

- deliver safer and kinder care,
- become the beacon for clinical excellence, and
- be nationally recognised for innovation and excellence in person-centred care, education and research.

The FHP has adopted a strategic approach to ensure all decisions are aligned with the strategic plan and the investments made to maximise return. This includes clearly defined strategic and tactical processes as well as a roadmap, outlining how the different strategies would be executed in the short, medium and long term with the required resources.
The aim is to develop Logan and Beaudesert Hospitals into Beacon Hospitals.
This strategic priority will provide the platform for delivering safer and more reliable care. The ultimate goal within this area is to achieve no preventable patient harm by adopting a safety culture and through the utilisation of Digital Hospital technology to access real-time patient information and data.

**Goal**
To achieve no preventable patient harm and be recognised as a High Reliability Organisation.

**Objectives**
Create a robust and mature safety environment underpinned by the five characteristics of a High Reliability Organisation.

**Indicators of success**
- Zero preventable patient harm.
- All 'mission critical' safety factors consistently achieve a reliability score of 10.
- Optimising Digital benefits.
Safety & Reliability Initiatives

Digital Hospital Implementation

Digital Hospital is one of the largest investments made by Queensland Health in improving the quality of healthcare for our patients.

Digital Hospital is the first initiative designed as the foundation to support improvement in reliability, and was implemented collaboratively between the eHealth Queensland, Metro South Clinical Informatics Digital Hospital teams and frontline clinicians.

From November to mid December 2017, Logan and Beaudesert Hospitals introduced:

- The integrated electronic Medical Record (ieMR) system which changed the way clinicians access patient information, replacing a predominantly paper-based system with a secure electronic record.
- MARS (Medication, Anaesthetics, Research and Support) module of the ieMR.

Digital Hospital is focused on improving patient safety and quality of care by providing the right information, at the right place, at the right time.

The introduction of Digital Hospitals has laid the foundation to implement further safety initiatives and support Logan and Beaudesert Hospital on its journey to becoming a high reliability organisation.

Examples of these initiatives included the introduction of high risk medication dashboards and the management of deteriorating patients dashboard that will support the teams in improvement of reliability of care in these areas.

The Metro South Health Healthcare innovation and transformation Excellence Collaboration (HITEC) in collaboration with Logan and Beaudesert Hospital teams are in the process of developing further ‘live’ dashboards that will continue to support improvement in reliability and safety of patient care.
### Civility and Respect in Everything (C.A.R.E.) Program

LBH have partnered with the Cognitive Institute to improve our safety and reliability in our delivery of healthcare. The C.A.R.E. Program works hand in hand with the "Speaking Up For Safety" message. It provides a platform for people to give feedback to their colleagues who have championed or undermined a culture of civility, respect, professionalism and safety. The C.A.R.E. Program is based on the Vanderbilt Accountability model.

We are trying to achieve:

- an overall civil and respectful environment for our staff and patients alike.
- improved self-regulation through vigilance of professionalism and safety.
- an established and reputable safety culture in the organisation.
- a reduction in preventable patient harm through increased staff adherence to organisational safety protocols.
- increased reliability in various targeted safety metrics.

The program was launched in February 2018.

Safety & Reliability Initiatives

Speaking up for Safety (S.U.F.S.) Program

In partnering with Cognitive Institute, Logan and Beaudesert hospitals have introduced Safety Champions to support teams in safety and reliability. Our goal is zero preventable patient harm in our hospitals.

Trained Safety Champions are providing training to all staff of Logan and Beaudesert hospitals. Speaking up is an expectation from all staff where potential compromises to patient safety are identified.

OUTCOMES

20% of workforce trained in SPEAKING UP FOR SAFETY

17 SAFETY CHAMPIONS identified & trained

Logan Hospital’s Safety Champions
Safety & Reliability Initiatives

Speaking up for Safety (S.U.F.S.) Program

Dr Anna Hallett
- Staff Anaesthetist

“I believe that we are all part of a single team working together to provide an excellent standard of care for our patients. This is why I was keen to be a Safety Champion, spreading the message that working together, with mutual respect for the different qualities that we individually bring to patient care, is the key to our success.”

Darren Clark
- Nursing Director Medicine

“Patient safety is a long-term passion for me and my career goal is to work in an organisation where no avoidable harm occurs. In a culture of safety, everyone benefits, most importantly our patients but also all our staff. I believe Logan has all the right ingredients to be world-leading in this area.”

Darren Hassen
- Nurse Unit Manager, Children’s Inpatient Unit

“I believe as members of the health care professions we come into people’s lives for a short time when they themselves, a family member or someone close to them are vulnerable due to ill health. These people depend on us to ensure that they are cared for safely, with skill and then returned to their lives.”

Dr Nick Shortt
- Staff Specialist Orthopaedics

“I want to make people realise we are all responsible for patient care and safety. We work in the ultimate team environment and the culture of hierarchy needs to be dismantled. All our goals are the same, we bring different levels of experience and expertise to the care of our patients. That all needs to be considered and respected.”

Dr Prasad Challa
- Director of Cardiology

“Since becoming a Safety Champion I have had the opportunity to help colleagues practice safety and create a culture where issues of patient safety can be respectfully raised. Achieving a culture where safety and quality is part of everyone’s job is important to ensuring the safe care for our patient’s.”

Sally Porter
- Director of Pharmacy

“Patient Safety is at the heart of everything we do in health care and central to my training as a pharmacist. Working in an organisation where there is a culture of ‘having each other’s back’ and staff are comfortable and supported to ‘speak up’ is the kind of place I want to work and where I would recommend people come to receive care.”
Safety & Reliability Initiatives

Reliability Science Training

In partnership with Cognitive Institute, Logan and Beaudesert Hospitals are increasing the reliability and safety of healthcare delivery by maximising the chances of optimum patient outcomes and reducing the risks to clinicians and healthcare organisations of complaints, claims, adverse publicity and accreditation or regulatory body censure.

Reliability science is used to design systems that compensate for the limits of human ability and can improve safety and the rate at which a system consistently produces desired outcomes.

The workshops held by Cognitive Institute empowers healthcare leaders to examine and enhance the modes of healthcare delivery utilised within their team or unit by applying the science of reliability, with the aim to improve systems to perform at a $10^{-2}$ level of reliability and beyond.

OUTCOME

148 RELIABILITY SCIENCE PARTICIPANTS
Training in progress

Reliability Science participants
Workforce Capability
Strategic Priority

This strategic priority is underpinned by organisational culture. We aim to create a positive culture that empowers and enables our staff to deliver their very best work. The focus will be on creating capacity and building capability of staff through education and training that supports our future vision and equips staff with the required tools and resources to do their job within a rapidly changing work environment.

Goals
To develop and enhance our workforce skills and abilities to meet future hospital needs.

Objectives
Create capacity and build capability of staff through three key areas and enablers of successful performance – leadership, strategy and delivery.

Indicators of success
- Improved workforce satisfaction - “I love working here”
- Staff provided with the appropriate skills to remain agile and responsive.
Workforce Capability Initiatives

Manage 4 Improvement

The Manage 4 Improvement (M4I) program is aimed at Clinician Managers and Supervisory roles. M4I focuses on the integration of leadership, management and improvement science to support successful implementation of organisational change and system improvements. M4I sessions provide training on:

- Understanding the broader healthcare environment and funding arrangements
- Leading and managing change
- Quality and service improvement
- Improving and evaluating health service delivery
- Finance and budget management
- Effective stakeholder engagement
- Conflict management
- Strategic influencing
- Political astuteness
- Leading, motivating and inspiring staff.

Outcomes

24 staff completed M4I training program

Improvement Projects commenced

- Benchmarking Medical Imaging Nurses
- Refined Onboarding process for commencing Nursing staff at Logan Emergency Department.
- Improving time to transfer of admitted ED patients to inpatient wards post ward bed allocation.
- Increasing patient activity levels on the Rehabilitation ward.
- Patient perspectives on pre-operative information (PPPI)

Participant Feedback

96% rated the program as excellent or good
74% said their leadership and management skills were enhanced
78% believe their current role and career have benefited

- Practically very relevant to my current job and when acting for my boss. Gave us lots to think about and a few things to act upon on our return to work.
- This workshop was fantastic and very relevant to my role.

- This will improve time to meaningful treatment and length of stay in the department. We also anticipate an improvement in patient and staff satisfaction.
- Improved resilience, retention and engagement of nursing staff in the workplace.

Manage 4 Improvement participants
Workforce Capability Initiatives

Transformational Leaders Program

The Transformational Leaders Program is aimed at Clinical Directors and Nurse Unit Managers (NUMS). Transformational Leaders Program focuses on building transformational leadership capabilities to create and drive sustainable positive change.

The program aims to enhance staff morale and motivation and inspire change driven by a strong purpose to create a culture of trust and innovation within LBH.

OUTCOMES

32 STAFF COMPLETED TRANSFORMATIONAL LEADERS PROGRAM

Participant Feedback

- 100% said their leadership and management skills were enhanced
- 86% believe their current role and career have benefited

Green belt training

A review on future provider will be required.

- This was one of the most beneficial courses I have attended with actual outcomes I can relate to.
- It can be implemented in our department.
- I will use what I have learnt in my workplace. Great for the future direction of the hospitals.

Human Factors

Systems Thinking Learning Lab sessions are aimed at introducing contemporary ideas in safety, quality and systems improvement to the workforce. These sessions included Systems thinking and Practical Human Factors.

System Thinking introduces concepts and principles through a range of case studies, interactive games and group work.

Practical Human Factors introduces human factors engineering and its critical role in healthcare improvement by participants exploring a range of ways in which human factors influence how we deliver healthcare. Participants are also exposed to useful tool that they can immediately utilise in their day-to-day systems improvement decisions.

Executive Onboarding

The Executive Onboarding initiative was designed to enhance our executive’s leadership skills in order to set the vision of the Future Hospital Program and to positively influence our staff on the transformational journey.

This included training and coaching on the following:

- FHP strategy and vision and what is required by Executive for success of FHP.
- Why influence is one of the most powerful and important capacities a leader can possess.
- What do successful influencers do that separates them from the rest?
- Role-modelling behaviours/professional accountability.
- Strategic vs Operational Planning.

OUTCOMES

18 PARTICIPANTS ATTENDED CRUCIAL CONVERSATIONS Training

88 PERSONAL COACHING SESSIONS for Executives

Support for Executives

Regular individual executive coaching over a 12 month period are held to continue to develop, guide and support Executives including a group session.

Participant Feedback

- 100% rated the program as excellent or good
- 82% said their leadership and management skills were enhanced
- 82% believe their current role and career have benefited

Executive Onboarding & Discovery Session Evaluation pending.

- Excellent workshop and I very much enjoyed discovering my leadership capabilities.
- The course was well structured with different activities and discussion opportunities. The content was relevant and well presented. There were excellent networking opportunities and the presenters were approachable and helpful. There was variety in the manner that the information was presented. Good examples were also presented. Would have no hesitation recommending this course.
Quality Improvement
Strategic Priority

This strategic priority will provide the tools and techniques to make it easier to improve care using a defined improvement methodology. This area will explore evidence-based practice models that will allow us to pilot new models of care and innovations that will define Logan and Beaudesert Hospitals as leaders in quality improvement across Australia.

Goals
To embed a culture of continuous quality improvement through the use of best practice methodologies.

Objectives
Implement changes that will lead to better patient outcomes, better system performance and better professional development.

Indicators of success
- Staff trained in improvement science.
- Staff have access to improvement experts.
- Staff finding it easier to leverage Digital data to improve care.
Quality Improvement Initiatives

Excellence in Bedside Care (EiBC)

Future Hospital Program is aiming to achieve a systematic way of delivering safe, high quality care to patients across all clinical areas. We will be using a proven platform, in an accelerated approach to achieve this goal.

The program is known as Releasing Time to Care (RT2C) and is an advanced component of the Productive Ward Series. The philosophy behind the program is to help front-line clinicians release time to care through reduction of ‘waste’ and ‘overwork’. By adopting the program, it has been proven that front-line staff can significantly increase the proportion of time they spend directly with patients and improve outcomes across four key areas:

1. Improve patient experience.
2. Improve efficiency of care.
3. Improve staff well-being.

The program provides a structured framework, built on improvement science, that will assist the wards and units to deliver the changes they want to see. It provides the staff with both the permission and the skills to make improvements to the clinical workplace, whilst making it easier to do their job. The program will be supported by the Future Hospital Team and a suite of tools that will be an ongoing resource for continuous improvement.

Excellence in Bedside Care

An integrated package of Productive Ward and MOS. World First trialling on digital platform.

TARGET: 60% DIRECT CARE TIME IN NURSING

LAUNCHED IN 2 PILOT WARDS

Ward 3A and Renal Dialysis Unit (haemodialysis)

I have been part of the EiBC steering committee in my role as Divisional Director for Medicine and Emergency. I have been hugely impressed as to how the whole project has been run. On a more operational level I have been delighted with the positive changes made in Ward 3A and the Renal Dialysis Unit, that have embraced the project with great enthusiasm and passion. This has led to obvious improvements that will positively impact on patient care.

- Dr Brian Wood, Director Medicine & Emergency Services

The highlights of EiBC Leadership Rounding is getting to know the executive team and feeling like they are aware of the issues we face and also receiving feedback from them on our issues.

- Staff survey feedback

EiBC Leadership Rounding is great for putting a face to the name - not being as daunted by the person when I see they’re actually interested in my ward area.

- Staff survey feedback
Quality Improvement Initiatives

Management Operating System (MOS)

MOS is a systemic approach that incorporates the use of visual management boards, daily/weekly huddles and various lean management tools and methods to help deliver the best outcomes for our patients and staff by solving problems that are encountered at the frontline and in all areas of the organisation.

It is one of the key initiatives that we are deploying as we work towards embedding a culture of continuous improvement in our organisation; by moving problem solving away from the desk of the manager or team leader and empowering our staff to lead and undertake continuous improvement.

OUTCOMES

- MOS Boards Implemented (RDU x 2, Ward 3A, FHP, CGU & Division of Surgery)
- Additional areas have requested MOS Boards
- The introduction of the new intercom SAVES WARD 3A STAFF 4732km PER YEAR (946 HOURS PER YEAR)
- RENAL DIALYSIS UNIT patient flu vaccination rate 30% → 70%

Sharing our positive outcomes is great. Identifying concerns in the unit, bringing it to the attention of most staff concerned and coming up with strategies to resolve these concerns. MOS has also been a great communication tool for our unit.

- Staff survey feedback

MOS is a great communication tool and I love that it has opened up communication between us and the hospital’s executive.

- Staff survey feedback
Hospital Acquired Pressure Injuries

This project is aimed at reducing the number of late stage pressure injuries occurring at Logan and Beaudesert hospitals year over year. It supplements the work that has been started in mid-2017, looks at addressing the root causes of the late stage pressure injuries, and implement changes and interventions that are sustainable. The project has been facilitated by the Future Hospital Program with involvement in data analysis, root cause analysis and solutions identification by the frontline staff. Some of the solutions that have come out of the project team have been a redesigned equipment hire process and pressure injury monitoring form, use of NUM/MUM dashboards to monitor timely skin assessments, training of frontline staff on pressure injury staging and clinical incident reviews.

Through the work that has been put in and increased visibility of the importance and management of pressure injuries, Logan and Beaudesert Hospitals have already seen a 59% decrease in pressure injuries in 2017-18 compared with 2016-17.

**Featured:** DNMS Lorraine Stevenson with the Stomal Therapy and Wound Management Team.
LBH are undertaking a pilot in a short notice survey accreditation process, with the new accreditation cycle commencing 1 August 2017. This pilot is run in partnership with the Australian Commission on Safety and Quality in Healthcare (ACSQH – the Commission), the Australian Council on Healthcare Standards (ACHS – the Accreditation Agency), Queensland Health and Wide Bay HHS.

This change in accreditation process has been proposed to move the organisation to a state of continual readiness for accreditation and continual quality improvement. The Short Notice Survey process aims to ensure quality standards are embedded in to the day-to-day operational responsibility of every employee.

This initiative will contribute to improving safety and reliability across the hospital.

**Short Notice Survey (SNAAP)**

Logan Beaudesert pilots Short Notice Survey accreditation process

Logan-Beaudesert passes Short Notice Survey with flying colours

3G MAPU/Palliative Care Unit surveyor ready

Short Notice Survey. Are you ready?

Short Notice Survey Exclusion Period is Ending!

To clarify the recently requested participation in the pilot project, Logan and Beaudesert hospitals are piloting the Short Notice Survey Accreditation Process. As you’re all aware, Logan and Beaudesert Hospital’s National Safety and Quality Health Service Standards QHEPS page for accreditation.

Short Notice Survey Accreditation Survey Pilot is now underway. This initiative is aimed at taking a different approach to patient safety and quality assurance, focusing on rapid, unannounced visits by surveyors.

To participate in the survey, staff are encouraged to be prepared for sudden visits and to ensure all necessary documentation is readily available. The surveyors will aim to complete their work within a short timeframe, providing feedback to the hospital immediately after the visit.

Short Notice Survey Accreditation Survey Pilot is underway to evaluate the effectiveness of this new approach and to gather insights from participating hospitals. The pilot is expected to influence future changes in accreditation processes, aiming to improve overall patient safety and quality outcomes.

For more information or to participate, contact LBHClinicalgovernance@health.qld.gov.au or 3299-8697.
Virtual Fracture Clinic

The introduction of a multidisciplinary Virtual Fracture Clinic at Logan Hospital is seeing real time savings for patients and the orthopaedic outpatient department for minor bone injuries of the hand, wrist, foot and ankle. The model has been developed to reduce the amount of time patients need to spend coming to clinic, reduce the administration around clinic bookings, and provide a more effective treatment option for patients with direct referrals to Allied Health Rehabilitation for their particular injury.

This initiative contributes to our quality improvement goal of always aiming to improve.

OUTCOMES

New patient-centred model of care resulting in significant saving and better patient care.

Approx.

$57,000 SAVINGS on admin costs per month

634 Patients “seen” in Virtual Fracture Clinic

44% DISCHARGED to Allied Health

43% DISCHARGED to GP

13% REFERRED TO Fracture Clinic

Virtual Fracture Clinic paying off for patients
This strategic priority focuses on designing a healthcare service that is responsive to individual and community needs. Through initiatives such as Planetree and Kindest systems and Standard 2: Partnering with Consumers, we will create a person-centred culture.

**Goals**
Embed a person-centred organisational culture guided by the voice of our patients.

**Objectives**
Embed a universally useable framework for implementing person-centred care practices.

**Indicators of success**
- Improved patient satisfaction.
- External validation and recognition in person-centred care.
Person-Centred Care Initiatives

**Experiential Workshop and eLearning Module**

The Person-Centred Care Experiential Workshop and eLearning modules are designed for all staff throughout LBH and Redland Hospital to experience care from our patient’s perspective.

During the workshop, staff take a closer look at person-centred care—what it means for our patients AND what it means for their own wellbeing—with our new experiential learning program.

**Consumer Advisors**

Logan and Beaudesert Hospitals work with Consumer Advisors who are former or current patients of our service or carers of someone who has been a patient. Our Consumer Advisors share their patient/carer experience and participate on Governance Committees and working groups. Feedback from consumers had led to direct improvement in services.

Person-Centred Care Initiatives

Person-Centred Care Champions

Logan Hospital now has 28 Person-Centred Care Champions. Our champions and members of our Consumer Partnership Committee will assist in cultivating a culture of person-centred care by being positive change agents and role models for Logan Hospital. This initiative is part of our Planetree journey to excellence in person-centred care. All champions and members of the Consumer Partnership Committee have met and it was a great opportunity for our champions to meet each other and start sharing their experience in person-centred care.

15 Steps Challenge

The 15 Steps Challenge is a way to understand what good quality care looks and feels like from the patient’s perspective and is an initiative of Excellence in Bedside Care. The challenge involves participants engaging their senses to listen, smell, look and feel in order to understand the first impressions of a patient resting or a family member visiting their loved ones.

The activity is all about continuously improving the patient experience. The 15 steps challenge has been held at Logan Hospital in Ward 3A and Renal Dialysis Unit during March 2018 for the first time with our Consumer Partnership Committee, to provide some key steps that the areas can take to improve the patient experience.

Since the challenge has been completed, Ward 3A and the Renal Dialysis Unit teams have been working through the feedback to identify some things that they can improve. These include the introduction of the Intercom System and bright welcoming sign at the entrance of Ward 3A, and the proposed installation of curtains in the bathrooms and toilet to aid in patient privacy.

The Renal Dialysis team has installed the “Messages of Hope” wall in their unit to increase the visual appeal and improve the overall sense of welcoming for all.

Logan Hospital plans to roll the 15 Steps Challenge out to other wards throughout 2018.

Piloted in 2 wards - also part of Excellence in Bedside Care (EiBC) Program

Virtual Reality Goggles Research - Palliative Care / Rehab / Griffith University

Logan Hospital’s Palliative Care and Rehabilitation Units are embarking on a unique opportunity to improve patient experience.

Virtual Reality (VR) is a fascinating way for patients to travel using nothing more than the power of technology. With a headset and motion tracking, VR lets them look around a virtual space with captivating video and immersive audio as if they’re actually there.

Logan Hospital has commenced a research study with Griffith University into VR patient experiences.

Research is lacking in exploring the potential benefits of virtual/augmented reality technology in patient care where there are many potential benefits such as:

- Improved patient experience.
- Reduced opioid usage.
- Improved quality of life.

Funding for the VR research study was provided by the Future Hospital Program.

Planetree Bronze Certification

Metro South Health will submit the application for Planetree Bronze Certification for excellence in person-centred care in September 2018.
Person-Centred Care Initiatives

Logan Hospital - Consumer Partnership Committee

The Logan Hospital Consumer Partnership Committee was established in February 2018. The Consumer Partnership Committee has three Consumer Advisors and an interdepartmental staff membership who work in partnership to shape our person-centred care priorities.

The Committee oversees and assists the implementation and maintenance of person-centred care principles to align with the MSH commitment to excellence in person-centred care.

The Committee has provided feedback on MSH Policies including the MS Health Literacy Policy and MSH Family Presence and Care Partner Policy, participated in the Social Impact Assessment as part of the Logan Hospital Expansion project, trialled the 15 Steps Challenge, undertook a review of the posters and signs and have contributed to a number of initiatives to improve health literacy.

Logan Hospital - Review of posters and signs

On 15th May 2018, the Logan Hospital Consumer Partnership Committee undertook a review of the posters and signs. The areas that were reviewed were:

- **Area 1**: High traffic public areas – including Hospital Entrance, foyer and reception area, Hospital Street and the pharmacy and pathology waiting area.
- **Area 2**: Specialist Outpatient Department – Antenatal, Paediatrics and Fracture Clinic
- **Area 3**: Emergency Department – Adult, Children and Foyer.

From this review, it was evident that there is an abundance of posters that create clutter on our walls which makes it difficult for our patients and visitors to know what information is important. Some posters were not written in a way that was friendly and welcoming or were difficult to read/understand, some posters are torn and many were repeated/duplicated. This review has resulted in a large number of unnecessary posters being removed.

Logan Hospital’s Consumer Partnership Committee

Pictured (L to R): Siobhan Holland (DSO Allied Health), Karen Green (Manager Consumer Liaison), Albert Winterton (Quality Assurance Radiographer), Cheryl Wardrope (Planetree Coordinator), Anne Coccetti (Director Allied Health and Chair), Paula MacDermott (Senior Dietitian), Tanya Ormsby (Consumer Advisor), Sylvia Penhaligon (Brisbane South PHN), Michelle Allen (Consumer Advisor).

Absent: Diane Higgins (Consumer Advisor), Becci Brown (A/ Paediatric CNC), Helen Maney (Nurse Educator), Angel Bogicevic (Multicultural Resource Development and Training Officer), Aneta Bilal (Multicultural Liaison Officer), Pam McErlean (CNC Quality).
Person-Centred Care Initiatives

Logan Hospital - Social Impact Assessment of the Logan Hospital Expansion

The Logan Hospital Expansion Project is a Queensland Government commitment to cater for and meet the growing demand of healthcare services of the local Logan city population. The social impact assessment was led by the MSH Consumer and Community Engagement Team to identify the social and economic impacts expanding Logan Hospital would have on the community and on patients. A series of focus groups including people from culturally and linguistically diverse communities, people with a disability, Aboriginal and Torres Strait Islander people, visitors to the hospital, local community members and local business and education representatives were held over a period of two weeks. Key issues identified included potential issues with parking, wayfinding, noise, the need for welcoming environments, a refresh of the prayer room and a need to ensure the community was kept abreast of developments were identified. Participants also agreed that the inclusion of services not currently offered at Logan Hospital such as chemotherapy would ensure family members and patients do not have to travel to other locations for care.

All of the opportunities above have been addressed in the final proposal which is currently with the Department of Health for approval. More details on the expansion project are attached.

Beaudesert Hospital - Social Impact Assessment of the Logan Hospital Expansion

Beaudesert Hospital - Consumer Advisory Committee

The Beaudesert Hospital Consumer Advisory Committee continues to forge ahead with their person-centred care initiatives. The Committee has focused on the development and implementation of the Patient Directed Visitation and Care Partner Procedure, provided feedback on MSH Policies including the MS Health Literacy Policy and MSH Family Presence and Care Partner Policy, developed a partnership with a local high school to provide artwork for the Paediatric Bay and the planning for a mural in the Maternity Unit.

OUTCOMES

Beaudesert Hospital - Patient Directed Visitation and Care Partner Procedure

Beaudesert Hospital implemented their Patient Directed Visitation and Care Partner Procedure in August 2017. This is a key initiative towards achieving excellence in person-centred care.
ED Ambassador Trial

Logan Hospital’s Emergency Department trialled an ED Ambassador role over 6 weeks. The Ambassador started on 14 May 2018 and it has proved a positive addition to the ED team.

The Ambassador’s role is to attempt to meet and greet all patients/visitors that enter the waiting room. This sets a tone, and allows the ambassador to assess any stress/anxiety issues and recognise any re-presenting mental health patients.

The Ambassador is also available to assist clinical staff de-escalate situations if required but mostly to engage with patients and their families, get a sense of how they were feeling and assist them where he can. Setting a great first impression and humanising the ED experience gives the patients

and visitors a positive feeling about the treatment they will receive at the Logan Hospital.

The Ambassador role could be considered a side adjunct to the Planetree initiative, the work the ambassador does aligns with many of the 10 Planetree components.

The Ambassador has assisted in relieving pressure off the triage and reception desks, by assisting patients with basic enquiries and improving the flow of patients/visitors through the waiting room.

The initial statistics reported were very encouraging and based on these and feedback from the ED, the trial will be extended for another 12 months.

### OUTCOMES

Reduction of call outs for Security Officers to the ED triage/waiting room

since the introduction of the ED Ambassador
This strategic priority details the overall goals for research and innovation in Logan and Beaudesert Hospitals. There are three clear elements within the priority – Culture, Collaboration, and Infrastructure.

This is to ensure that we support our staff in the conduct of research and innovation activities and we promote opportunities to integrate evidence into practice improvement.

Our ultimate goal is to become a Centre of Research and Innovation Excellence.

Goals
To be recognised as an organisation that supports and produces world standard clinical research and innovation.

Objectives
Contribute to the well-being of the community by providing our patients with excellence in healthcare through collaboration, culture and infrastructure.

Indicators of success
- Innovation maturity.
- Research and Innovation Centre of Excellence.
- Increased publications.
Research & Innovation Initiatives

Logan Hospital Research Report 2017

The inaugural Logan Hospital Research Report provides an excellent display of the evolution of research within Logan and Beaudesert Hospitals; its completion is a key milestone. The Report acknowledges the achievements of researchers across our hospitals from the intrepid and novice researcher to the most advanced. It provides an opportunity for internal and external stakeholders, University partners and researchers collectively to overview the body of research activity conducted every day within our hospital walls. Our hope is that the report provides inspiration for all researchers and celebrates our achievements during 2017.
Research & Innovation Initiatives

Logan Research Advisory Service
The performance of research is frequently delayed by management and governance systems and procedures. Obtaining ethics and governance approval has become increasingly complex and often burdensome and disproportionate to the conceivable risks to research participants. The Logan Hospital Advisory Service provides mentorship, advice and hands on support with regards to protocol development, ethics and governance applications; and other items required to conduct research. The service provides support to all disciplines within our hospitals.

Logan & Beaudesert Hospitals’ Research & Innovation Symposium
Preparation for the Logan and Beaudesert Hospitals’ Research and Innovation Symposium 2019 is well underway. As well as marketing and showcasing research and innovation activities, the symposium will increase the profile of research and innovation activities both within our hospitals and externally to the wider Logan and Beaudesert communities.
